

**RS300 Radon Test**

Serial #01394  
Calib. #31863  
TestID #30173

Address Topsham 04086  
Location Bsement  
Technician DCK  
Period 216 hrs

**Average Radon Level, pCi/L: 3.6**

The Federal recommended level for action on radon is 4.0 pCi/L or greater. Maine would like the target level to be 2.0 pCi/L but does not recommend action unless the level is above 4.0pCi/L. Action can be retesting or the installation of a system. Numbers above 10.0 do not need retesting prior to the installation of a system. The RadStar 300 radon tester has a correction factor of + or - 10%.
